Information to the users

These slides have been prepared for a conference, as a support to an oral presentation. They may not always be fully self-explanatory without the accompanying text...

They represent the opinion of their author, on the day of their oral presentation. They are posted on the Infovac website for educational purposes exclusively. The author declines any responsibility for their potential misuse.

These documents have been prepared under a pdf format – which can be viewed or printed with Adobe Reader. Should you wish to receive a Powerpoint file, please contact the author directly.

We hope that you will find these documents of interest.

La rougeole n'est pas une maladie bénigne : complications et hospitalisations (CH 2003)

COMPLICATIONS: 1 patient sur 6

(91 patients, 15.1%):

- 4 encéphalites
- 1 état mal convulsif
- 2 myocardites
- 1 péricardite
- 24 pneumonies
- 3 hépatites
- 19 otites
- etc

Hospitalisations 1/15 (7%)

La vaccination protège des complications

91 patients:

- 77 (85%) enfants non vaccinés
- 2 enfants 1 dose (pneumonie, X)
- 1 enfant 2 doses (otite)
- 11 état vaccinal inconnu

La vaccination protège des hospitalisations :

- 33/44 enfants non vaccinés
- 11 état vaccinal inconnu
